

- A new series of full-spectrum sound products, light-weight and easy to fit into existing walls, corners and ventilations,
- for homes, schools, conference rooms, studios and theaters.
- Join't development between Quflow and LampeiDesign

Customers

- Problems with noise from A/C or ventilation
- Willing to pay for better sleep/relaxation or more nuances in sound
- 90% have problem, 20% knows it, 5% buys low-dB products

Problem

Noise can not be eliminated in AC and ventilation (forced air systems)

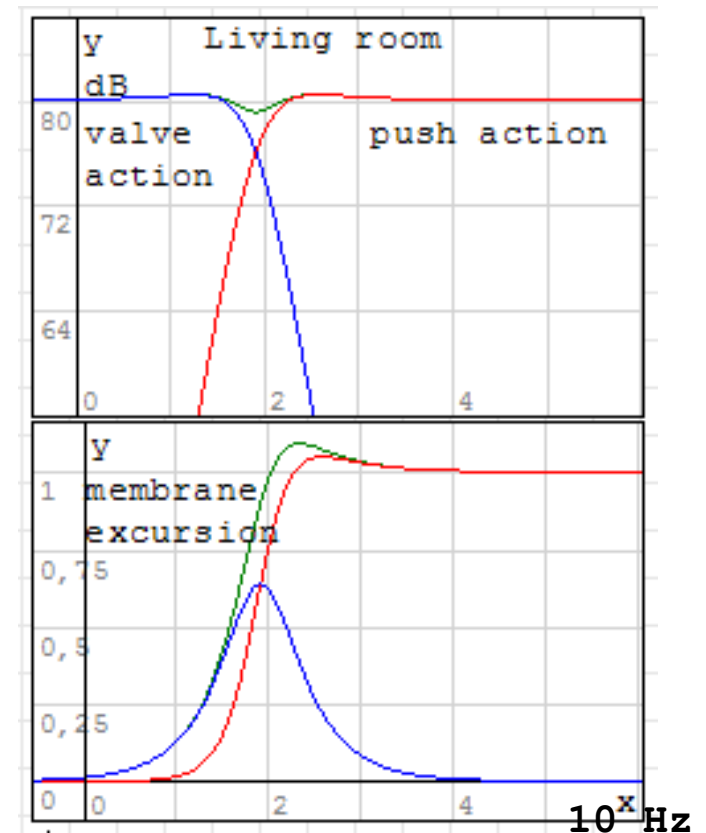

- Noise is often peaking in the 10-100 Hz range
- Noise cancellation does not work well below 100 Hz

Need

- A new, full-spectrum, efficient technology for cancelling noise in forced air flows

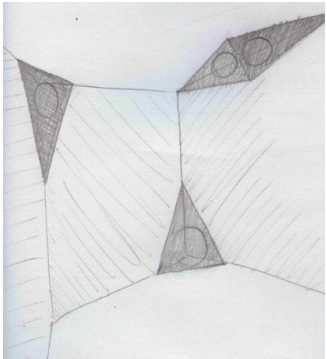

Solution

- Membrane valves replace the normal vents in a room or A/C unit
- The valve membranes modulates the air flow for cancellation of noise
- Operates well and without any significant energy loss from DC to ~2 kHz
- Can also produce full-spectrum sound →→→
- Reduces the noise level by a factor 10-15 dB: 50→35 dB(A) for A/C, 40→25 dB(A) for vent

Market estimates

High-end HiFi (HW)

Swegon etc	-
Kick-starter	-
Webshop	-
Resellers	1-10 Mkr/yr
Apps	-

Market introduction 2018 Q1
Dev. financed by sponsor customers

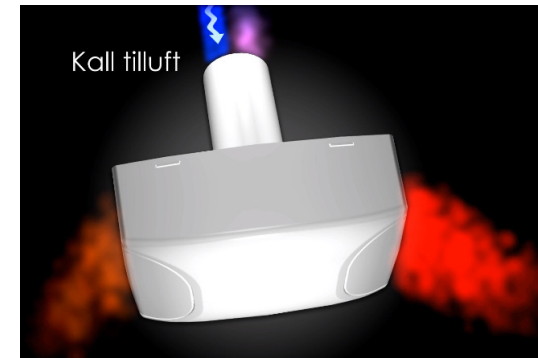

High-end ventilation (SW)

Swegon etc	-
Kick-starter	1-10 Mkr
Webshop	1-100 Mkr/yr
Resellers	-
Apps	0.1-1 Mkr/yr

Market introduction 2018 Q3
Dev. financed by kick-starter customers

High-end A/C (IP & apps)

Swegon etc	1-100 Mkr/yr
Kick-starter	-
Webshop	-
Resellers	-
Apps	1-100 Mkr/yr

Market introductions 2019 Q1 & 2020 Q1
Development financed by sales

Roadmap

- 2016-12-30 10-100 Hz sound generation and cancellation (if prototype funded with 50-100k SEK) →
 - 2017 Q1 Kick-starter campaign and technology-buzz seeding
 - 2017 Q1-Q2 Malmö Live silence financed by Engström sponsors
 - 2017 Q3-Q4 Arena speaker financed by event manager
 - 2018 Q1 Start distribution to high-end HiFi retailers via Engström
 - 2018 Q3 Start distribution to high-end ventilation customers via Orlo or own webshop
 - 2019 Q1 Start licensing to high-end A/C customers via Swegon
 - 2019 Q3 Start licensing to high-end car and aeroplane manufacturers via own brand.
 - 2020 Q1 Start selling follow-me silence, follow-me sound and follow-me air apps for Engströ, Orlo, Swegon and licenced products.
 - 2020 Q3 Start selling and maintaining acoustic room design plans and tools to arena and home-theater constructors

Återkoppling från tänkbara kunder

- "Perfekt för att få bort åksjuka och jetlag från lågfrekvent buller i bilar och i flygplan" (Studentfeedback om Boomrooms business-case)
- "Oj. Om du kan göra ngt i stil med [Devialet's] Phantom så är din lycka gjord. Jag längtar fortfarande efter en demo. Dessutom, alla har problem med buller från A/C inom high-end HiFi." Timo, VD på Engström.
- "När du har en mer färdig produkt som tar bort buller och störningar via ventilationssystemet vill vi sälja den!" Fredrik, VD på Orlo
- "Vi har försökt med annan teknik tidigare men inte lyckats." Thomas, produktchef på Swegon → letter of intent eller bättre fras!!!
- "Exempel på pågående projekt är störning från vindkraft, ljudkvalitet hos värmepumpar och ljudmiljö inomhus från installationer. Lågfrekvent ljud är en viktig aspekt. Däremot [har vi] ingen större möjlighet att reproducera infraljud i våra lab." Krister, ljudprojektansvarig på SP. → letter of intent eller bättre fras!!!
